ABSTRACT:

Integrated imaging and GPS network monitors remote object movement. Browser interface displays objects and detectors. Database stores object position movement. Cameras detect objects and generate image signal. Internet provides selectable connection between system controller and various cameras according to object positions.

ASSISTANT-EXAMINER: Jaketic; Bryan

ATTY-AGENT-FIRM: Croskell, Esq.; Henry

ABSTRACT:

The present invention is a method and apparatus that allows competing as well as complementing suppliers, vendors, service providers, purveyors, and other types of sellers internal inventory management as well as controlled design and publication of presentations for external near real-time interactive access to buyer-centered presentation, sales, distribution, and confirmation systems as well as other traditional media advertising and outreach. The Automated Media Presentation Generator including a Publication and Placement Control Engine, integrates a Distributed Sales and Inventory Control structure with Processing and Communications Resource Saver, and further provides a Reservation, Access, and Verification System replacing traditional ticket and confirmation methods.

File: USPT

Sep 3, 2002

DOCUMENT-IDENTIFIER: US 6446045 B1

TITLE: Method for using computers to facilitate and control the creating of a plurality of functions

Application Filing Date (1):20000110Brief Summary Text (9):

In the prior art, electronic Internet and Intranet presentations are developed either as static files that require constant and laborious manual updating or as dynamic (database-driven)

Brief Summary Text (10):

Although the dynamic presentations require less labor to produce and update, the various Internet or Intranet search or retrieval programs do not generally read or index them because of their "dynamic, database-driven" nature. This fact alone substantially reduces their effectiveness in reaching the most motivated buying public because those presentations are largely invisible to the wide range of automated searches conducted by potential buyers. With either design choice, substantial cost is experienced for the small to mid-size seller, either in the form of labor intensive presentation methods or in lost sales opportunity, which can never be recovered.

Brief Summary Text (11):

The electronic Internet malls and electronic directories, although generally much better staffed and able to produce effectively designed and edited content to motivate the buyer, suffer in part from the same dilemma. They are still faced with the same no-win choice between the labor intensive creation and placement for each presentation that gets the maximum visibility to the search methods of potential buyers and the easier database-driven presentation which get minimal visibility. One of the disadvantages to the advertising client of these electronic directories is that they find themselves publishing the same information in multiple directories or indexes as well as in their own stand-alone presentations in order to obtain the maximum coverage for access to the buying public. This supervision of multiple presentations is a control and management problem that is very costly and inefficient for the seller.

Brief Summary Text (16):

The invention allows sellers to present their inventory, products, goods and services in a choice of one or a variety of supported media outlets: in print, such as newspapers, magazines, periodicals, guidebooks, catalogs, brochures, fliers, and directories; in electronic form, such as online directories, web sites, bulletin boards, news groups, CD-ROMs, and interactive media and networks; and in other media, such as billboards, skywriters, bus benches, radio, interactive kiosk and any other form of customer outreach or information distribution. When these media choices are made, the present invention prompts the seller for information that is then used in the creation of presentations for the media outlets he has chosen. The Presentation Rules Database holds all the criteria, formatting architecture, and

distribution factors for each participating media outlet. The present invention's Presentation Generation Program, along with the Presentation Rules Database, then creates a presentation for each and every media outlet the seller has chosen. The Presentation Generation Program then either transmits the presentation to the appropriate destination or holds it for a publication date to be submitted for a particular deadline or predetermined promotional market.

Brief Summary Text (20):

The invention is a method and apparatus that allows for the creation of presentations that comply with the design and architectural requirements of any and all participating media. This is applicable to all media either in print, such as newspapers, magazines, advertisements, guidebooks, directories, fliers, and brochures; and electronic media, such as online directories and malls, web sites, bulletin boards, news groups, CD-ROMs, and interactive media and networks; and other media, such as billboards, skywriters, bus benches, radio, interactive kiosk, and any other form of customer advertising, outreach, or information distribution. These presentations can be updated for either presentation content or inventory control in near real time, by either manual or automatic means, via electronic message units from third-party management or inventory control software. Electronic presentations created can be either static open-access or database driven dynamic server presentations. Where appropriate, these presentations allow for the sale of products, goods, or services and for the making of payments by buyers. Inventory adjustments for production, sales, and other reasons are made in near real time, allowing for an accurate presentation of availability of inventory to buyers. The present invention allows for lower cost to management when used with all media outlets by creating a self-serve, automated billing environment for the seller's creation and display of presentations.

Brief Summary Text (21):

The invention is a method and apparatus that allows for the creation of both static and dynamic Internet and Intranet presentations for the sale of products, goods, and services to be accessible to the maximum number buyers and the interactive purchase of those products, goods and service. The present invention is a method and apparatus that allows buyers to purchase products, goods and service electronically and receive confirmation of that purchase.

Brief Summary Text (23):

The present invention allows for both complete inventory control and management and the global updating and accessibility of real-time and time-sensitive inventory while saving communication resources and time for any and all businesses that sell products, goods, and services regionally or world-wide. The invention allows for a substantial reduction of the communications and computer resources necessary to control and coordinate the availability, presentation, and sales of common, unique, or time-sensitive products, goods, and services. The present invention allows for the sales process to be adjusted so as to optimize the communications and computer resources used in relationship to the sales volume and Seller, Buyer, and usage profiles.

Brief Summary Text (42):

To allow for a more convenient method of purchase of tickets, passes, admission documents, or reserved services, or for the late purchase of those tickets, passes, admission documents, or reserved services beyond what would be feasible if physical delivery of the access or admission documents were required. The present invention allows for purchases to be made and buyer IDs to be transmitted to the facility, site, business or venue within a matter of minutes of the buyer arriving for admittance. By using an electronic network, Internet, Intranet, or phone service, a buyer could literally make the purchase by laptop computer with wireless modem or by cell phone from the car on the way to the facility, site, business, or venue for admittance. The invention, when used in conjunction with an electronic inventory-available presentation, can allow buyers to become aware of and take advantage of

ABSTRACT:

A system, method and article of manufacture are provided for identifying alliances among a plurality of business entities in components of a network framework. First, alliances are identified among a plurality of business entities in terms of components of a current network framework. Next, a pictorial representation is displayed of the current network framework and the components. The alliances are then conveyed by indicia coding the components of the current network framework in which the alliances exist.

ABSTRACT:

A system, method, and article of manufacture are provided for managing information in a development architecture framework. Common information that is used by a plurality of components of a system is allowed to be accessed in a single, shared repository. Unique information that is unique to the components of the system is stored in corresponding designated folders. Media content communicated in the system is managed based on metadata thereof.

ATTY-AGENT-FIRM: Oppenheimer Wolff & Donnelly LLP

ABSTRACT:

A system, method and article of manufacture are provided for account settlement utilizing a network. First, a buyer is allowed to select from a group of options in order to settle an account utilizing a network. The options include settling a minimum balance, partially settling, settling a full balance, and applying for an import loan on payment due date. The selected option is then received utilizing the network. Finance interest may then be booked against the buyer for an unpaid portion of the account if the selected option includes either settling a minimum balance or partially settling. If the selected option includes settling a full balance, the account may be reconciled. On the other hand, if the selected option includes applying for an import loan on payment due date, an import loan may be booked and a credit line may be transferred to a trade loan line.

**** See image for Certificate of Correction ****

TITLE: Integrated network for monitoring remote objects

Abstract Text (1):

Integrated imaging and GPS network monitors remote object movement. Browser interface displays objects and detectors. Database stores object position movement. Cameras detect objects and generate image signal. Internet provides selectable connection between system controller and various cameras according to object positions.

Application Filing Date (1):

19980319

Brief Summary Text (7):

The invention resides in an integrated fixed and/or wireless network and associated database and software functionality for monitoring and processing remote and/or local moveable objects. Preferably, the system implementation integrates singlechip digital imaging camera and Global Positioning Satellite system (GPS) receivers through generally accessible server processors using the Internet network and a software browser or functionally equivalent interface coupled thereto for monitoring and analyzing remote or local movement of one or more objects.

Brief Summary Text (8):

An object database or functionally equivalent data structure provided in digital storage and accessible to control software dynamically stores one or more positional and relative movement as well as optional associated map data. Various digital cameras preferably disposed at certain fixed and/or movable locations detect mobile objects and generate object image signal for processing thereof as described herein for particular applications.

Detailed Description Text (8):

Controller 6 may include one or more standard digital microprocessor unit, operating system software (e.g., Windows, NT, CE, etc.), digital storage devices (e.g., disk, memory, cache, etc.), output/input devices (e.g., keyboard, monitor, mouse, microphone, speaker, camera, etc.). Furthermore, controller 6 may include conventional network accessing interface firmware or circuit, such as Ethernet card, and remote processing or network access software such as web browser (e.g., Netscape Navigator, Microsoft Explorer, etc.), preferably using conventional or proprietary text, graphics, and other media format, such as Hyper Text Markup Language (HTML), Extensible Markup Language (XML), JAVA, or streamed video or audio data format. In this configuration, real-time or stored remote and/or local access is achieved via the Internet or functionally equivalent enterprise or intranet network of object data to or from one or more target units 4, for example, in accordance with the present invention.

Detailed Description Text (9):

As shown, network 8 further couples to one or more conventional Internet, intranet or other LAN/WAN network connection or server 5 and sensor or detector 3, as well as communicator 7 for communicating, preferably through conventional or proprietary

wireless connection, to one or more target unit 4. Note that server 5 may be any electronic hardware, firmware or software sufficient to couple detector 3 electrically and accessibly to network 8, and that detector 3 may provide substantially equivalent input functionality of sensor 44 of target unit 4. Preferably, electronic interface coupling between server 5 and network 8 provides for dynamic "hot-swap" interoperability, such that minimal network re-configuration and associated delay is required.

Detailed Description Text (14):

Integrated network growth is planned according to actual or anticipated network communication traffic corresponding to particular coupled detector-server sites, sets or geographical clusters thereof, such that locations associated with higher density of objects and/or movement thereof are installed with additional monitoring detector/server facilities. Accordingly, integrated system database maintains and updates past, current and planned location for each sensor coupled to such system, preferably as function of time or schedule. Additionally, when existing detector and/or server site is relocated, corresponding database entries 162 are updated.

Detailed Description Text (19):

In accordance with an important aspect of present invention, detectors 3 are accessible through the Internet, intranet, or other functionally equivalent networking connection. In this way, currently detected object data signal may be obtained therefrom. Any one or more user with proper access capability (e.g., computer with browser, Internet access, and proper authorizations) may observe or download such object data information, either in multi-cast mode (i.e., multiple observing controller users belonging to group, neighborhood or other common interest monitoring same detector or object or set thereof,) or point-to-point mode (i.e., single observing controller user monitoring one or more detector or object or set thereof). Data download may be delivered in JAVA applet format, preferably including search-able embedded pixel image or digital watermark, or otherwise authorized only to run on specified sites or processors. Preferably, each detector 3 couples continuously to provide digital data stream to Internet 8 generally through corresponding server 5 having identifiable IP address, packet identifier, or other network link to file or directory containing desired monitored object data.

Detailed Description Text (29):

Additionally, controller user may provide input to specify or request current or future monitoring or surveillance of one or more certain location (i.e., associated fixed detector site) or object (i.e., associated mobile target unit site). In this manner, software 66 is configured or updated via database records, object movement and observation rules, object, target unit or controller communications therewith, as well as any related transaction, diagnosis, reporting and security considerations appropriate to include, for recognizing or searching one or more object, or contextual observations at detector sites or object directories associated therewith.

Detailed Description Text (37):

Preferably target unit 4 is physically compact and/or rugged portable device, appropriate for hand-held use or mounting on instrumentation or in vehicle or automobile dashboard, and includes text multi-media, and/or graphic display output and associated drivers 43. Internet browser software may be provided therein to allow user remote communication and data access to other applications and databases via the Internet. Input functionality is provided for sensor 44, including possibly keypad, touch-screen, electrical signal port, etc. depending on application of target unit 4, such as hand-held use, or coupling to medical instrumentation.

Detailed Description Text (40):

Additionally software 66 therein includes operating system such as preferably Microsoft Windows or other conventional operating system, Internet browser software

PRIMARY-EXAMINER: Olszewski; Robert P.

ASSISTANT-EXAMINER: Fischer; Andrew J.

ATTY-AGENT-FIRM: Oppenheimer Wolff & Donnelly LLP

ABSTRACT:

A system, method and article of manufacture are provided for account settlement utilizing a network. First, a buyer is allowed to select from a group of options in order to settle an account utilizing a network. The options include settling a minimum balance, partially settling, settling a full balance, and applying for an import loan on payment due date. The selected option is then received utilizing the network. Finance interest may then be booked against the buyer for an unpaid portion of the account if the selected option includes either settling a minimum balance or partially settling. If the selected option includes settling a full balance, the account may be reconciled. On the other hand, if the selected option includes applying for an import loan on payment due date, an import loan may be booked and a credit line may be transferred to a trade loan line.

ART-UNIT: 211

PRIMARY-EXAMINER: Gordon; Paul P.

ABSTRACT:

A computer-implemented apparatus and method for coordinating paint-related process steps of at least one paint-related facility. The paint-related process steps exhibit paint-related characteristics. A data acquisition module is provided for acquiring paint characteristic data indicative of the paint-related characteristics. A paint process control data structure is provided for interrelating the acquired paint characteristic data with at least two of the paint-related process steps to produce interrelated paint process control data. A paint process control coordinator is connected to the data acquisition module for storing the acquired paint characteristic data in the paint process control data structure. A data display is connected to the paint process control data structure for remotely receiving and viewing the interrelated paint process control data.

File: USPT

Dec 11, 2001

DOCUMENT-IDENTIFIER: US 6330487 B1

TITLE: Computerized virtual paint manufacturing and application system

Application Filing Date (1):
19991223Detailed Description Text (14):

Networks 169 connect the various components of the system so that data communication can occur. The preferred embodiment for networks 169 utilizes an Intranet network 173 to perform data communication between components within the computerized virtual paint manufacturing and application system 120 and within the data sources 124. Moreover, paint manufacturer's remote sites are connected to Intranet 173. The customer remote sites 168 are connected to an Extranet network 175 to better ensure proper security exists in accessing the data from the computerized virtual paint manufacturing and application system 120. Security data is located preferably in technical database 172 for ensuring that only authorized users (whoever and wherever they may be) can view the portions of the information contained within the computerized virtual paint manufacturing and application system 120 that they are authorized to view.

Detailed Description Text (56):

FIG. 14 shows the steps involved in generating and utilizing automated weekly reports from the process control coordinator in order to analyze and control the operational parameters of the paint spraying system. At process block 500, factory technical service representatives input batch specific data into the process control coordinator data structures in real time. The batch specific data includes product data, plant data, batch performance data, and defect occurrence and type of defect. The process control coordinator generates a product-specific report that details the activities in the factory using information provided by the technical databases and the process control coordinator data structures.

ABSTRACT:

A system and method are provided for prioritizing components of an existing network framework. First, a plurality of components required for implementation of a predetermined technology using an existing network framework are provided. Next, a priority listing of the components is compiled such that the relative position of the components on the priority listing corresponds to a temporal priority among the components. The existing network framework and the components are pictorially represented. Next, a first component of the existing network framework is indicia coded in order to indicate that the first component must be installed first based on the component's position on the priority listing. Thereafter, a second component and any remaining components of the existing network framework is indicia encoded in order to indicate that the second component and any remaining components must be installed after the first component based on the second component's position on the priority listing.

ART-UNIT: 2122

PRIMARY-EXAMINER: Khatri; Anil

ATTY-AGENT-FIRM: Merchant & Gould P.C.

ABSTRACT:

A system, method and article of manufacture are provided for conveying redundancies and omissions among components of a network framework such as a web architecture framework. First, an area of an existing network framework is determined in which redundancies and omissions exist. Next, a pictorial representation of the existing network framework is presented along with a plurality of its components. The foregoing redundancies and the omissions are then highlighted by indicia coding the components of the existing network that reside in the area. As such, a diagnostic analysis of redundant efforts and gaps in a current implementation of the existing network framework is effectively conveyed.

ABSTRACT:

The present invention is provided for utilizing various types of user indicia such as search requests, products purchased, products looked at but not purchased, products purchased and returned, reasons for returning products, customers stated profile including income level, education level, stated profession, etc. for the purpose of customizing a user interface.

for Prioritizing Components of a Network Framework Required for Implementation of Technology", Attorney Docket No. M&G 8567.105US01, filed May 27, 1999, 9 pages. Portions of U.S. Ser. No. 09/321,360, "A System, Method, and Article of Manufacture for Phase Delivery of Components of a System Required for Implementation of Technology", Attorney Docket No. M&G 8567.106US01, filed May 27, 1999, 8 pages. Portions of U.S. Ser. No. 09/321,279, "A System, Method, and Article of Manufacture for Comparatively Analyzing Vendors of Components Required for a Web-Based Architecture", Attorney Docket No. M&G 8567.107US01, filed May 27, 1999, 8 pages. Portions of U.S. Ser. No. 09/322,073, "A System, Method, and Article of Manufacture for a Web-Based Architecture Sales Tool", Attorney Docket No. M&G 8567.108US01, filed May 27, 1999, 8 pages. Portions of U.S. Ser. No. 09/320,921, "A System, Method, and Article of Manufacture for Building, Managing, and Supporting Various Components of a System", Attorney Docket No. M&G 8567.109US01, filed May 27, 1999, 8 pages. Portions of U.S. Ser. No. 09/321,494, "A System, Method, and Article of Manufacture for Identifying Where Various Products are Focused in a Web Architecture Framework", Attorney Docket No. M&G 8567.110US01, filed May 27, 1999, 8 pages. Portions of U.S. Ser. No. 09/320,816, "A System, Method, and Article of Manufacture for Business Alliance Identification in a Web Architecture Framework", Attorney Docket No. M&G 8567.111US01, filed May 27, 1999, 8 pages. Portions of U.S. Ser. No. 09/321,950, "Methods, Concepts and Technology for a Virtual Shopping System Capable of Storing Previous Shopping Experiences for Later Reuse", Attorney Docket No. M&G 8567.113US01, filed May 27, 1999, 7 pages.

ART-UNIT: 2757

PRIMARY-EXAMINER: Lim; Krisna

ATTY-AGENT-FIRM: Merchant & Gould P.C.

ABSTRACT:

A system, method, and article of manufacture are provided for planning the testing of components of an existing network framework. First, a pictorial representation of an existing network framework is displayed along with a plurality of components of the existing network framework. Thereafter, the components of the existing network framework are indicia coded in order to convey a plan by which the components of the existing network framework are to be tested. The components may be indicia coded in order to convey an order of the testing or which components of the existing network framework are to be tested.

ABSTRACT:

A system is provided for building systems in a development architecture framework. The present invention is directed to both a system to be built and an implementation strategy to fulfill system requirements. Software components of the system are encapsulated with wrappers. The wrappers are adapted to be changed upon other software components of the system being changed while the encapsulated software components of the system remain unchanged. In one embodiment of the present invention, specifying the requirements of the system to be built and the implementation strategy to fulfill the requirements may be carried out using tools such as data modeling tools, process modeling tools, event modeling tools, performance modeling tools, object modeling tools, component modeling tools, reuse support tools, prototyping tools, application logic design tools, database design tools, presentation design tools, communication design, and usability test tools. In another embodiment of the present invention, improving the performance and maintenance of the system may be carried out using tools such as interactive

navigation tools, graphical representation tools, extraction tools, repository tools, restructuring tools, and data name rationalization tools.

ABSTRACT:

A system is disclosed that facilitates web-based information retrieval and display system. A wireless phone or similar hand-held wireless device with Internet Protocol capability is combined with other peripherals to provide a portable portal into the Internet. The wireless device prompts a user to input information of interest to the user. This information is transmitted a query to a service routine (running on a Web server). The service routine then queries the Web to find price, shipping and availability information from various Web suppliers. This information is then available for use by application programs such as wordprocessors, e-mail, accounting, graphical editors and other user tools. The system provides an innovative collaborative interface to many popular user applications that are useful in a mobile environment.

ABSTRACT:

A system, method and article of manufacture are provided for managing an environment in a development architecture framework. Service of a system is managed based on service level agreements and/or operations level agreements. A plurality of system management operations are performed. The system management operations include start-up and shut-down operations, back-up and restore operations, archiving operations, security operations, and performance monitoring operations. Service is planned in order to anticipate and implement changes in the system.

BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images include but are not limited to the items checked:

- ☐ BLACK BORDERS
- ☐ IMAGE CUT OFF AT TOP, BOTTOM OR SIDES
- ☐ FADED TEXT OR DRAWING
- ☐ BLURRED OR ILLEGIBLE TEXT OR DRAWING
- ☐ SKEWED/SLANTED IMAGES
- ☐ COLOR OR BLACK AND WHITE PHOTOGRAPHS
- ☐ GRAY SCALE DOCUMENTS
- ☐ LINES OR MARKS ON ORIGINAL DOCUMENT
- ☒ REFERENCE(S) OR EXHIBIT(S) SUBMITTED ARE POOR QUALITY
- ☐ OTHER: _____

IMAGES ARE BEST AVAILABLE COPY.

As rescanning these documents will not correct the image problems checked, please do not report these problems to the IFW Image Problem Mailbox.
